

Solutions for the Mining Industry

From the experts in Chain Technology

Tradition in Dynamic Innovation

The World Leader in Chain Technology

TYRE PROTECTION & TRACTION CHAINS

RUD supplies 65% of the world's tyre protection chain market which are used on wheeled machinery in mining, quarry and abrasive surfaces.

By adopting new technology from long-established welding, forging and heat treating methods, RUD has developed superior tyre protection and traction chains that are essential in the challenging site conditions of both open-cut and underground mines.

We provide the best technical know-how, the highest quality, and the most comprehensive product range

ENGINEERING CAPABILITIES

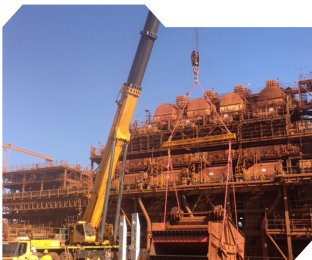

Our qualified in-house engineers provide concept-to-completion bespoke engineered solutions to increase efficiency and boost safety.

The comprehensive range of solutions we can provide are:

- Lifting & Spreader Beams
- Specialised Lifting & Lashing
- Material Handling Solutions
- General Fabrication
- Robotic Welding
- Transport Frames & Lifting
- Platforms
- Testing Services for assessment and verification of engineered products and structures
- Engineering Services for 3rd party review

SLING & LASHING SYSTEM

Over 700 certified lifting and lashing products for multi-directional loading including ICE Grade 120 chains to lift and move safely.

We provide both welded (from 0.5 to 100 tonne WLL) and bolted lifting points (from M6 to M150, 1/4 inch to 5 inch UNC). Use these lifting points in conjunction with our VIP and ICE lifting chains to match the needs of demanding jobs. We have a range of more than 370 different lifting slings and components.

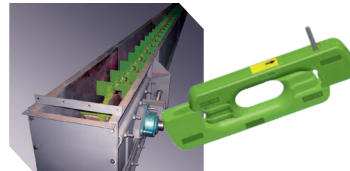

CONVEYOR & DRIVE SYSTEM

High performance quality systems and components for material handling, energy production and drive technology.

Our conveyor range includes:

- Drag Chain Conveyors
- Ash Removal Systems and Feeding Systems
- Complete Bucket Elevators
- Trough Chain Conveyors
- Screw Conveyors and
- Gambarotta Systems

WORKSHOP LIFTING & HANDLING

Our workshop lifting and handling solutions include Endurequip Portalift, which are the only portable heavy vehicle hoists made in Australia.

Portalift hoists operate using a unique chain drive, minimising the need for electrical parts. This design helps ensure the hoist to operate reliably and safely, with low maintenance costs. The hoists are portable, so heavy vehicles can be safely maintained both inside and outside the workshop.

Endurequip is the only portable mobile hoist used by the Australian Defence Force. Our hoists are also used by mining companies and quarry sites throughout Australia and New Zealand.
